Website Specification

The main objective of our website is to provide educational information to students and guardians about our services. As **Nielsen (1995)** explains, “Users should be able to find any information within three clicks.” This principle guides our site’s structure to ensure accessibility and ease of use.

Target audience

Our target audience includes parents/guardians of PSLE and JCE learners, as well as BGCSE and IGCSE students. According to **Krug (2000)**, “Don’t make me think” is the golden rule of web usability, meaning our design must be intuitive for both guardians and learners.

Technical Aptitude

My target audience are people who have some basic knowledge about web browsing emailing, online forms and most rely on mobile devices and slow internet. I will make my website light-weighted to enhance accessibility. **Jakob Nielsen (1995)** once said, “*Users should be able to accomplish their goals as quickly and easily as possible.*” so know my my audience technical aptitude will assist me in designing simple, fast, and accessible website. I will also make sure that they are no transactions that will be done to my website, because I every-well know that most of my target audience have not yet adopted online payment.

Demographics

According to my Demographic research that I did, I have learned that educational websites are mainly used by people who a between the ages 15– 50, which are both learners and guardians. Studies highlight that effective educational platforms must

balance clarity for younger users with credibility for adult decision-makers (**Smith, 2021**).

Goals

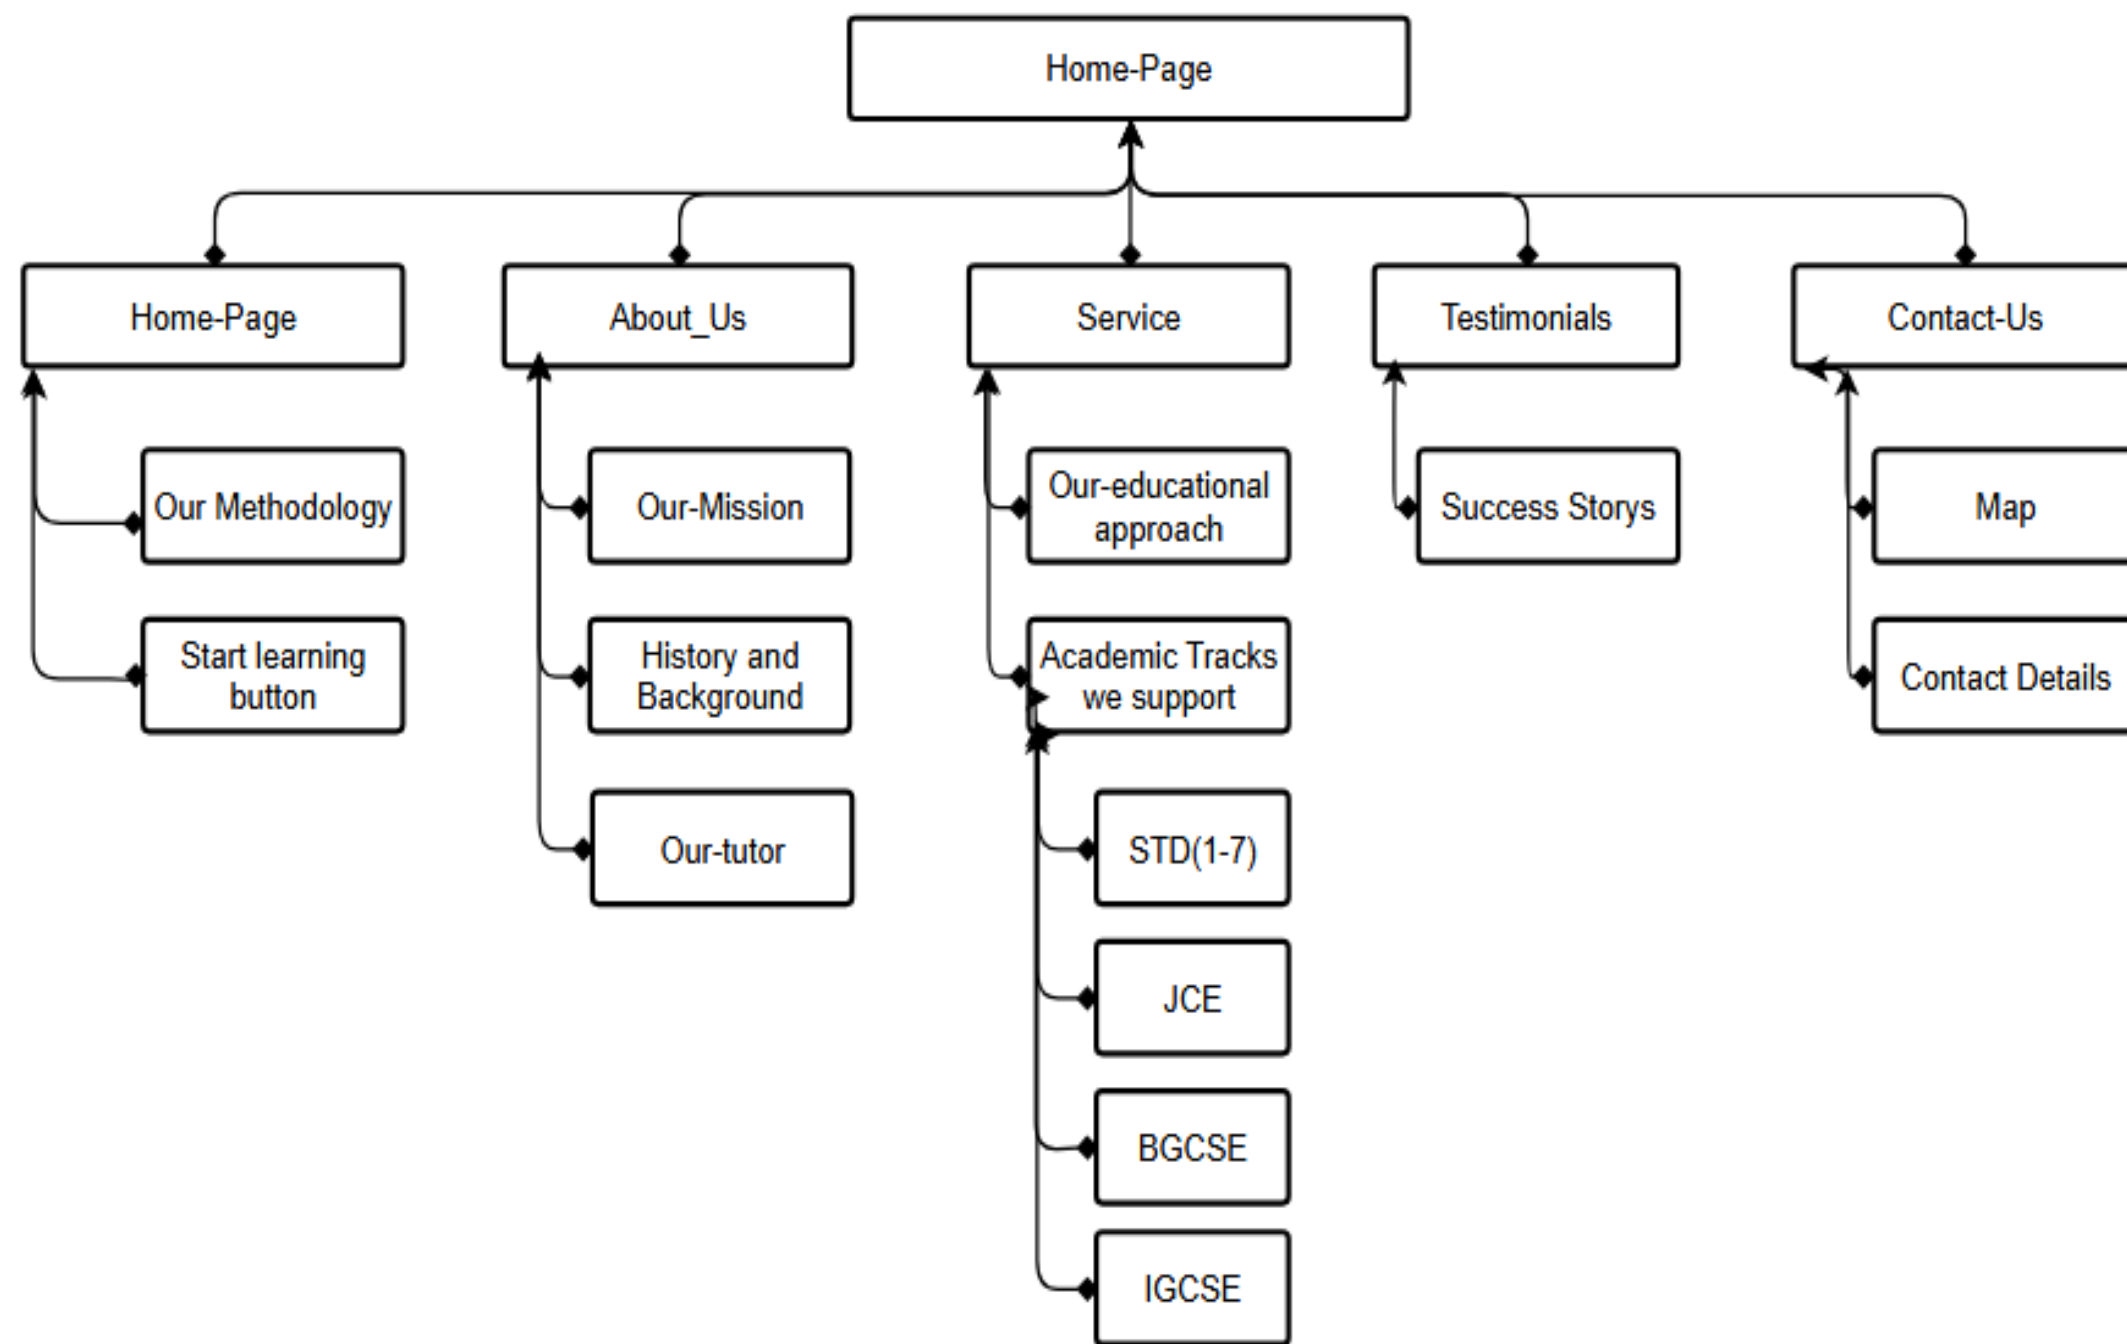

1. Promote Services –Websites build reputation by showcasing packages and testimonials, which my end user trusts you and u product. **(Brown, 2020).**

2. Build Credibility – “Trust is earned through transparency and visible qualifications” **(Jones, 2019).**

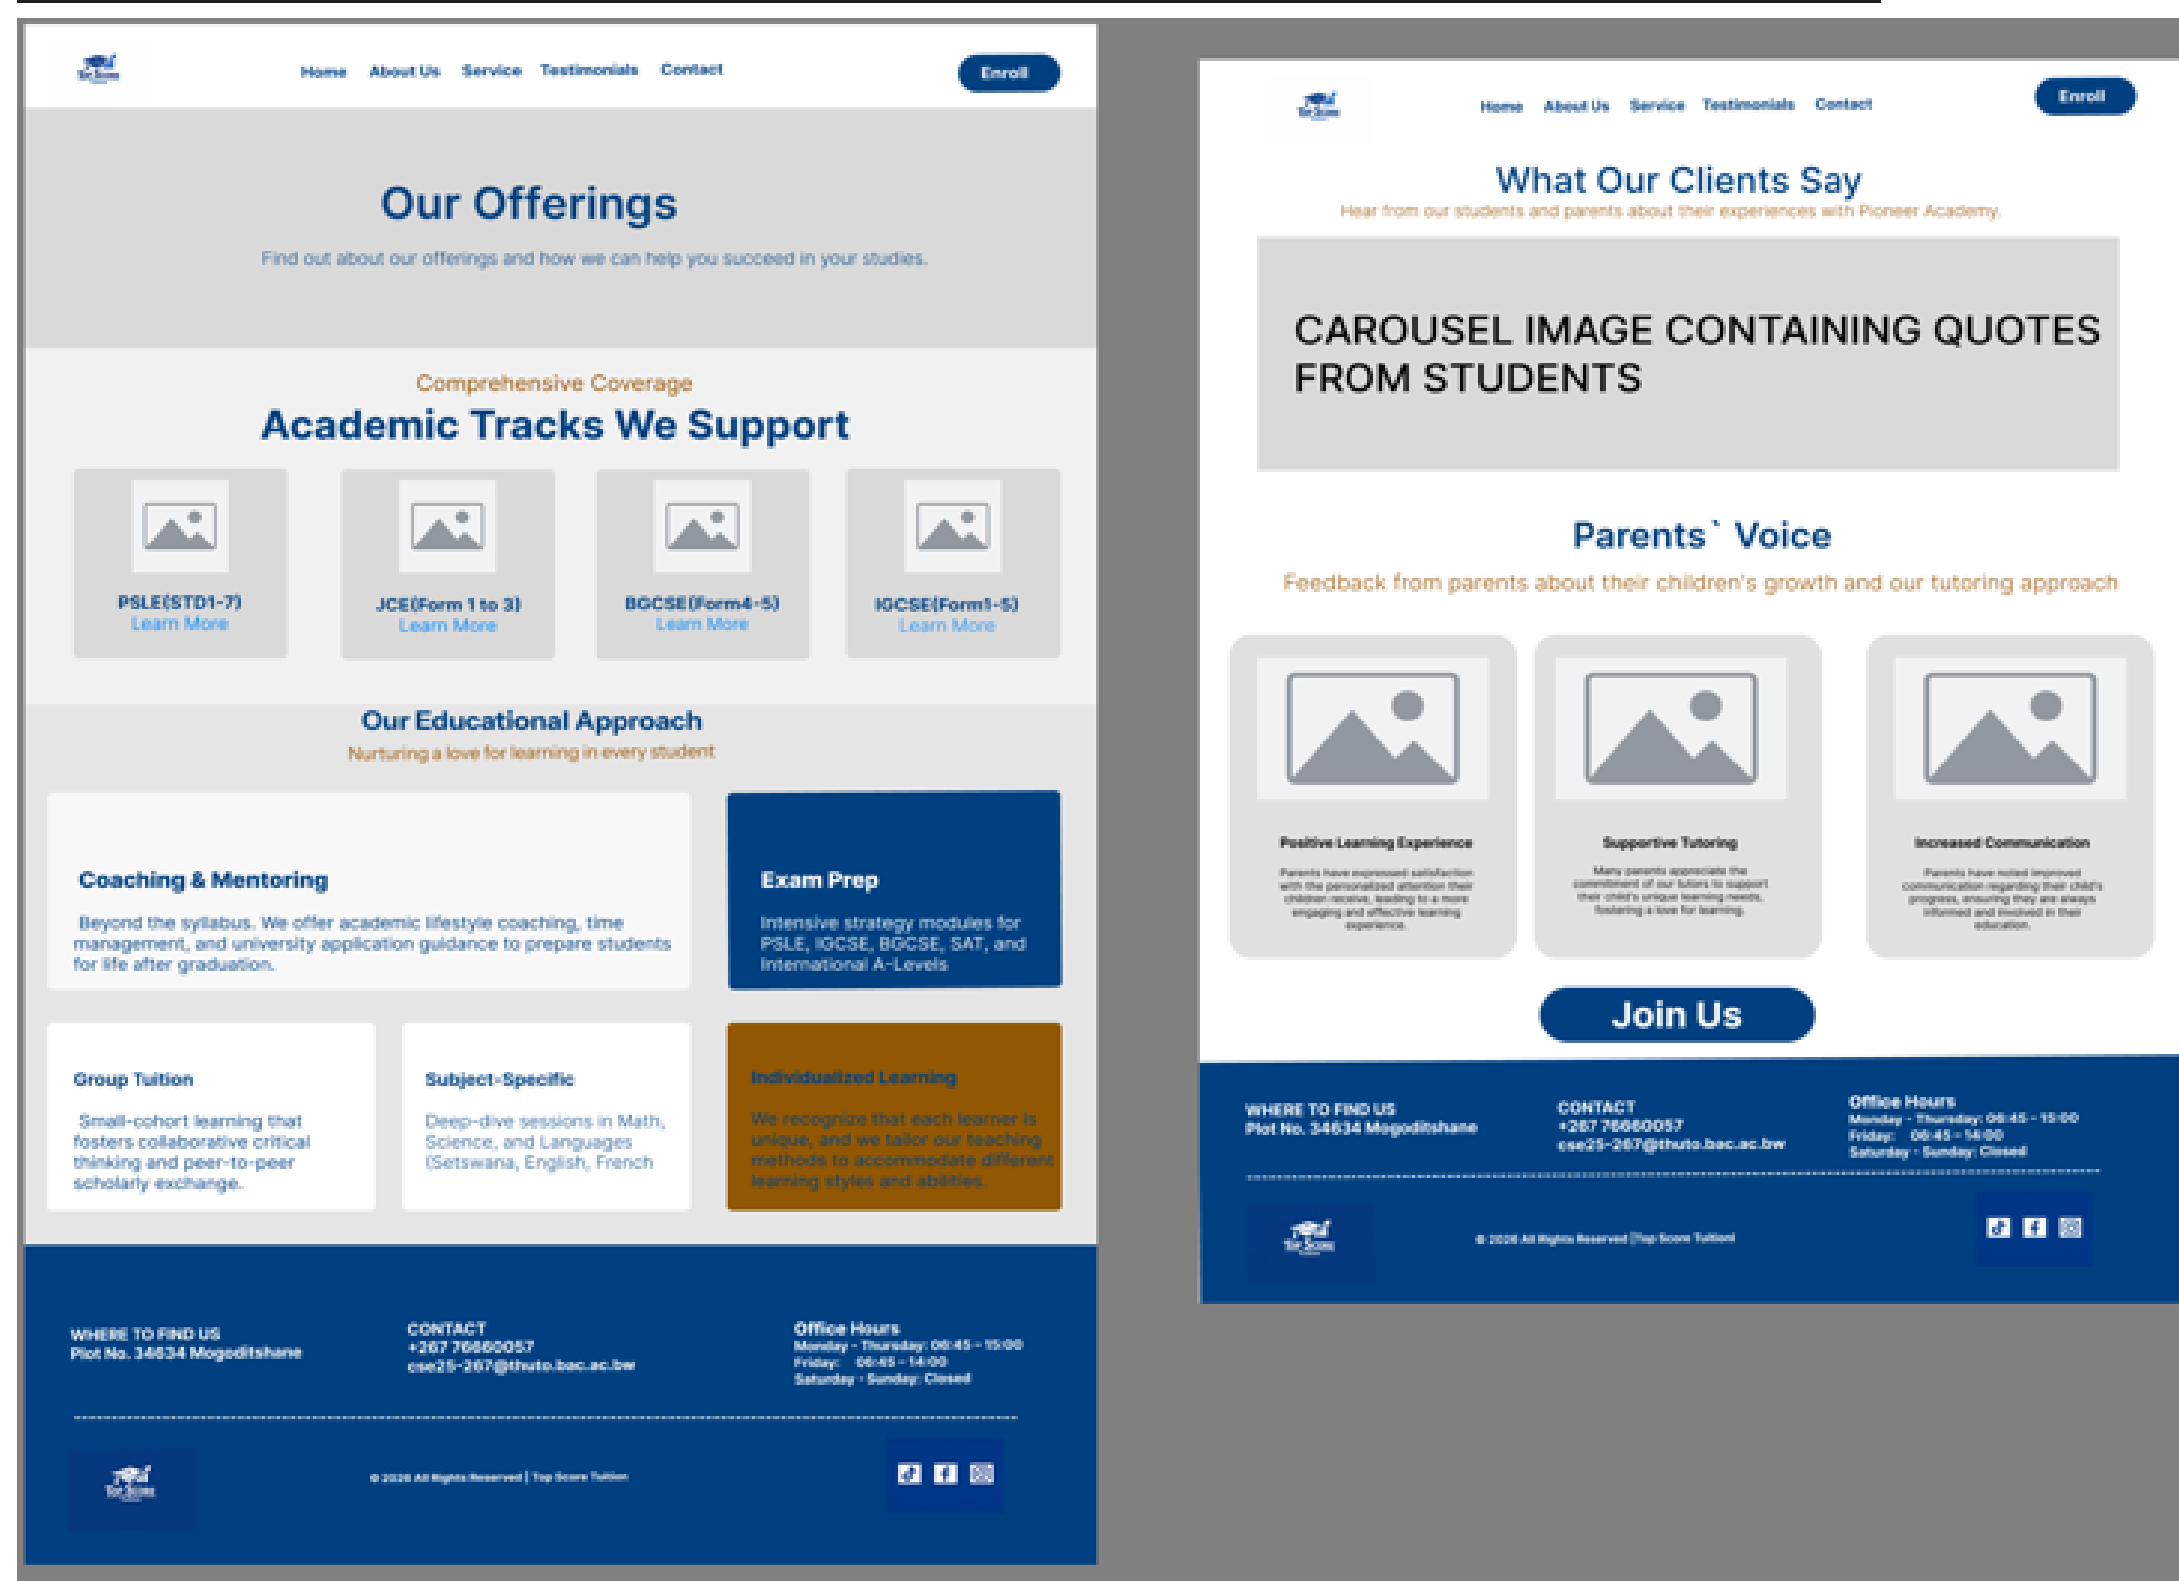

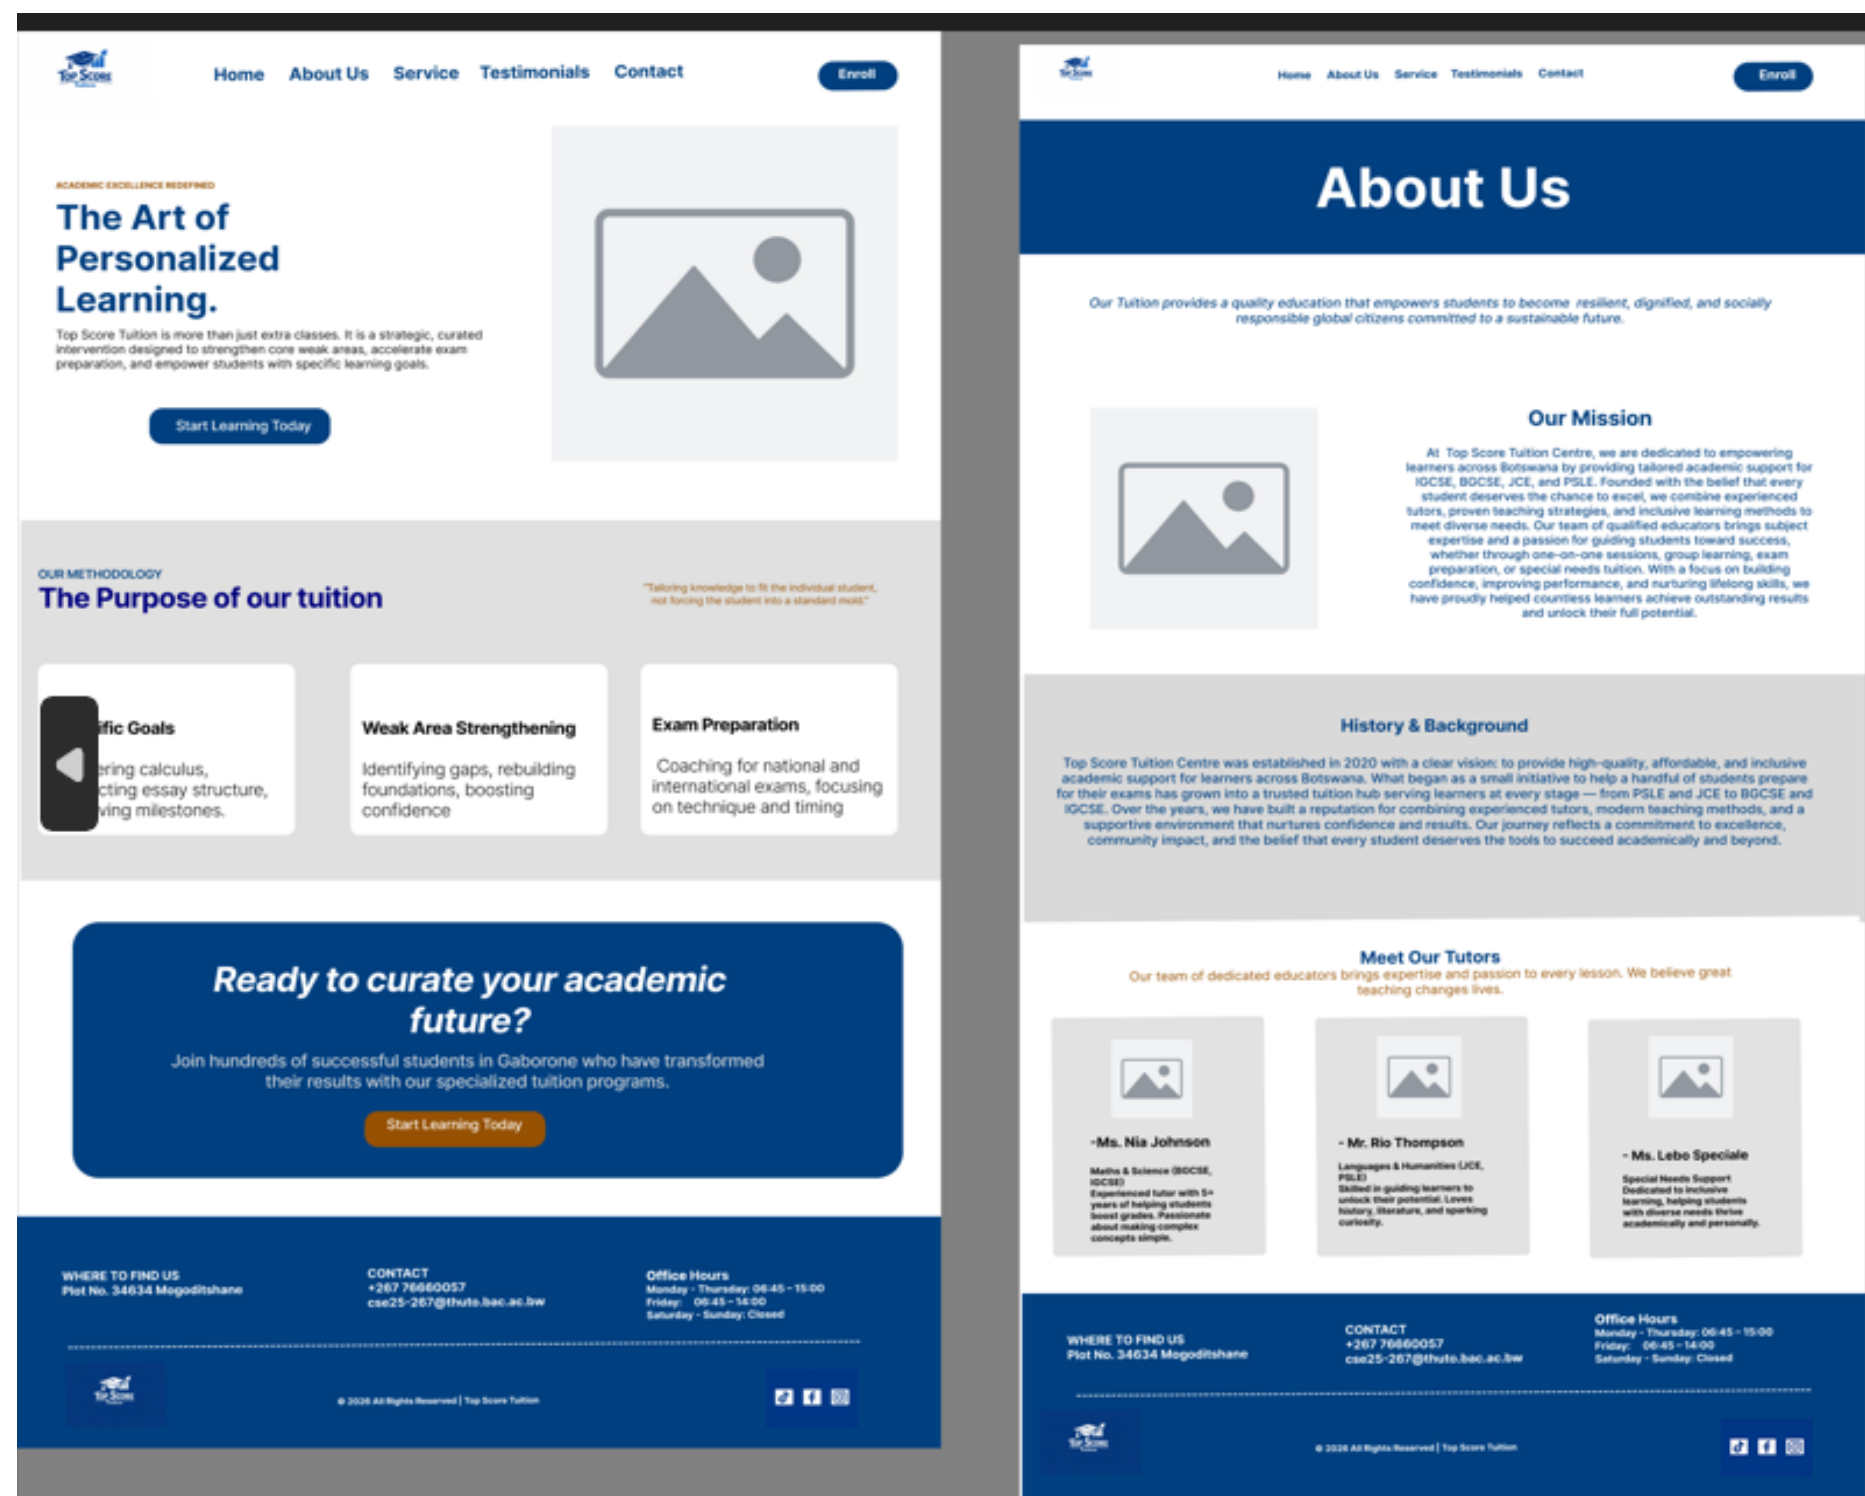

3. Improve Communication –Contact sections and inquiry forms are essential for bridging the gap between service providers and their audience **(W3C Guidelines, 2022).**

Information Design & Taxonomy

Here are is a structure of my pages with easy access to content(3clicks rule maintained)

Technical Brief

Because I will be developing my website which has multiple pages in short span of time, i will be using the following tools to speed up process and make my website more advanced.

Web Developments

HTML5: Newer website languages that have more element used to build website, so I will use it as a language for writing my Source code

CSS3: Cascading Style Sheet 3 its a language that is used to style and get website ready for presentation, I will use it for styling.

JavaScript: I will utilize it to add dynamic features.

Bootstrap: Boot Strap it more like a library for HTML and CSS that gives u code for responsive design and layout.

Software Tools

Visual Studio Code: It is one of the newer advanced IDEs.

GitHub: For version control and to publish my website on Git hub pages

Graphics Tools

Adobe Photoshop: Its one of the easiest to use app for editing image

Canva: It is a software tool used to style images.

Testing my website

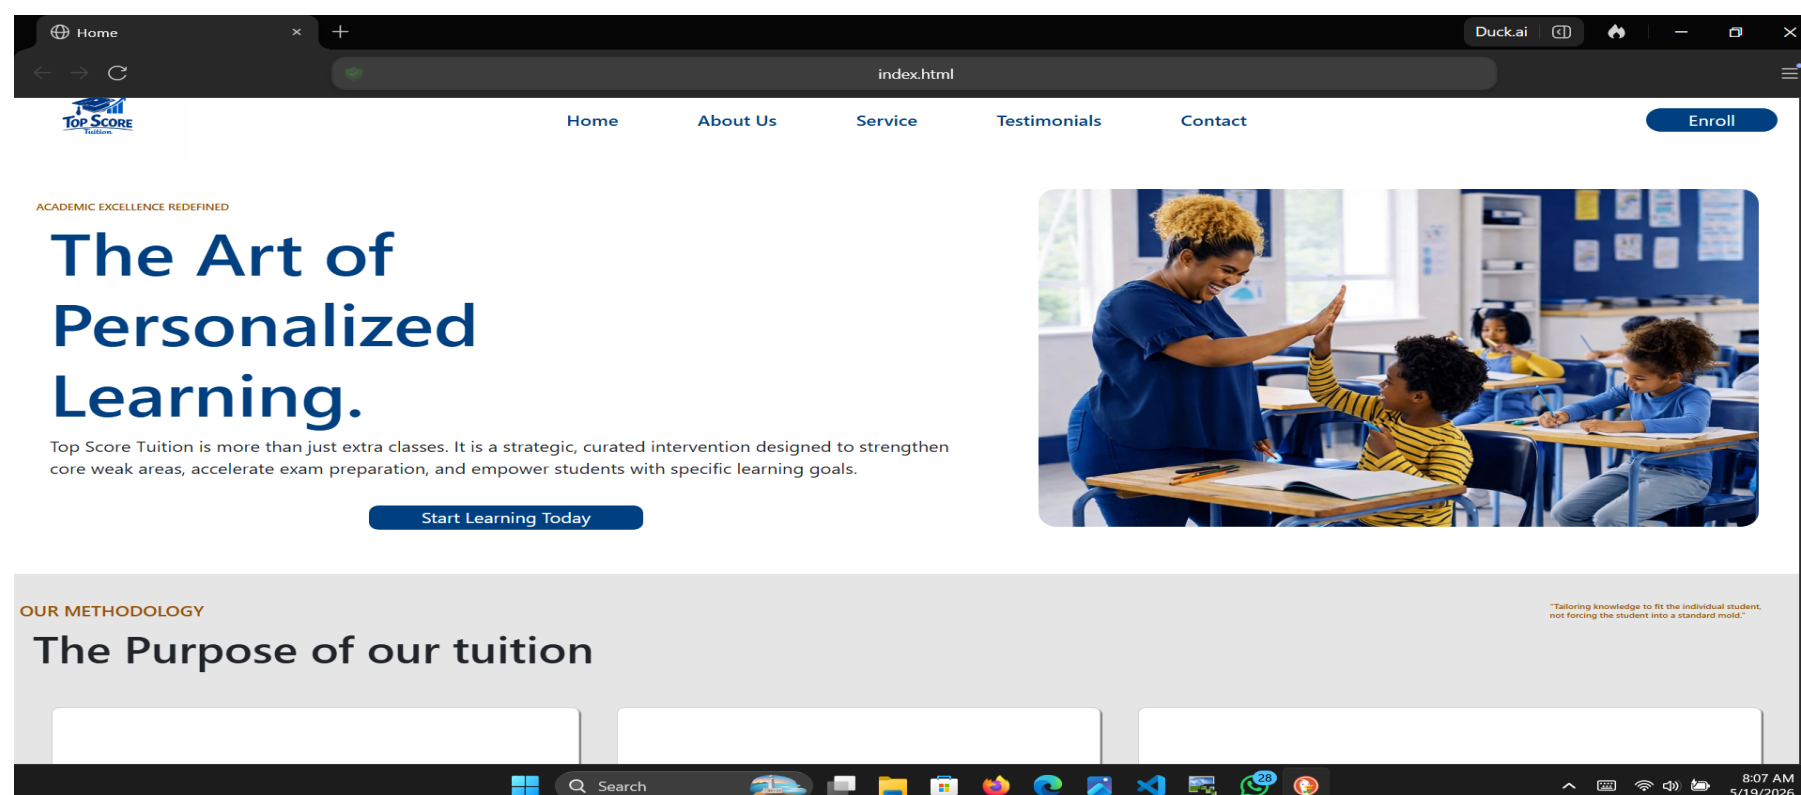

Web Browser for running the code (help to check) e.g fire fox, Microsoft edge .

Quality Assurance

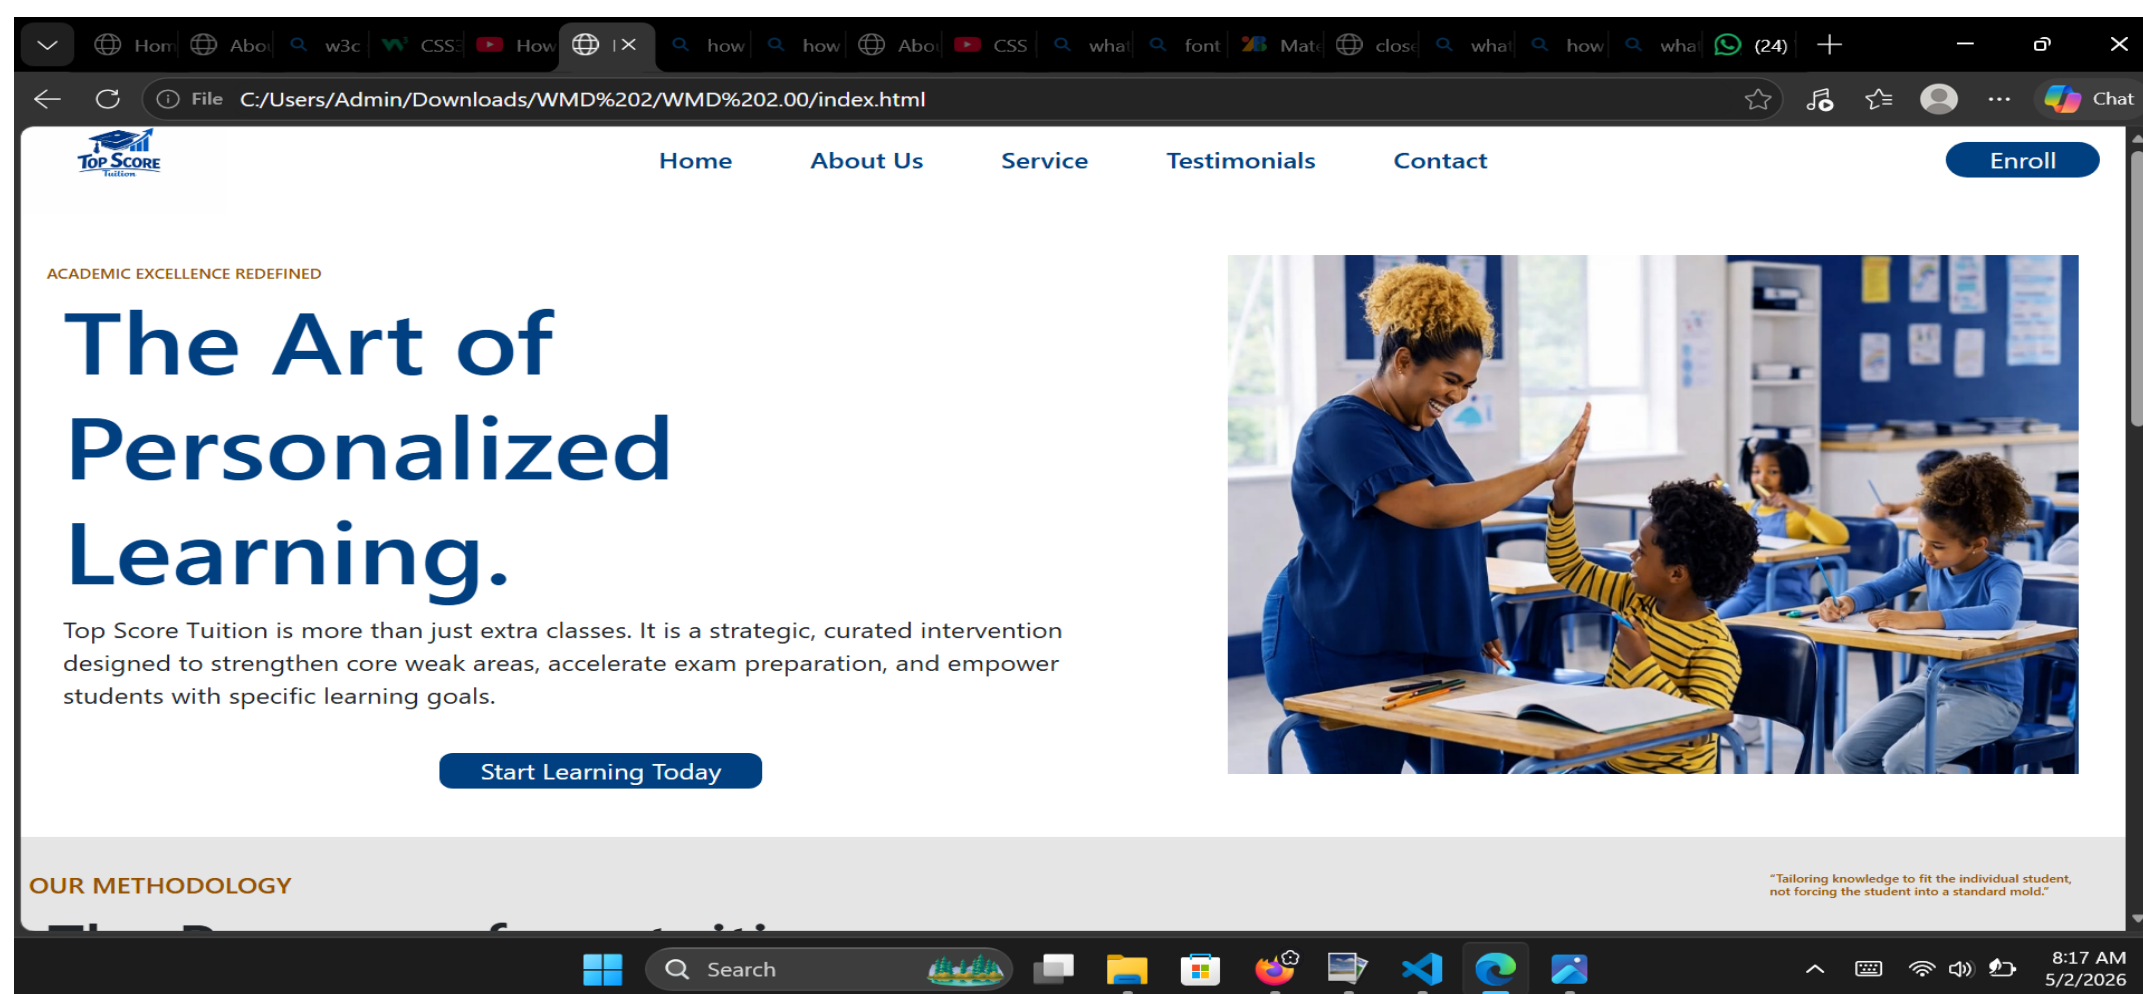

My website was tested on multiple browsers and different display screens for quality assurance. Below are images that indicate the results of this test, demonstrating the quality and showing that my website was coded to standard's.

Results for testing in different browsers:

In DuckDuckGo Browser

In Microsoft edge browser

In FireFox browser

ACADEMIC EXCELLENCE REDEFINED

The Art of Personalized Learning.

Top Score Tuition is more than just extra classes. It is a strategic, curated intervention designed to strengthen core weak areas, accelerate exam preparation, and empower students with specific learning goals.

Start Learning Today

OUR METHODOLOGY

"Tailoring knowledge to fit the individual student, not forcing the student into a standard mold."

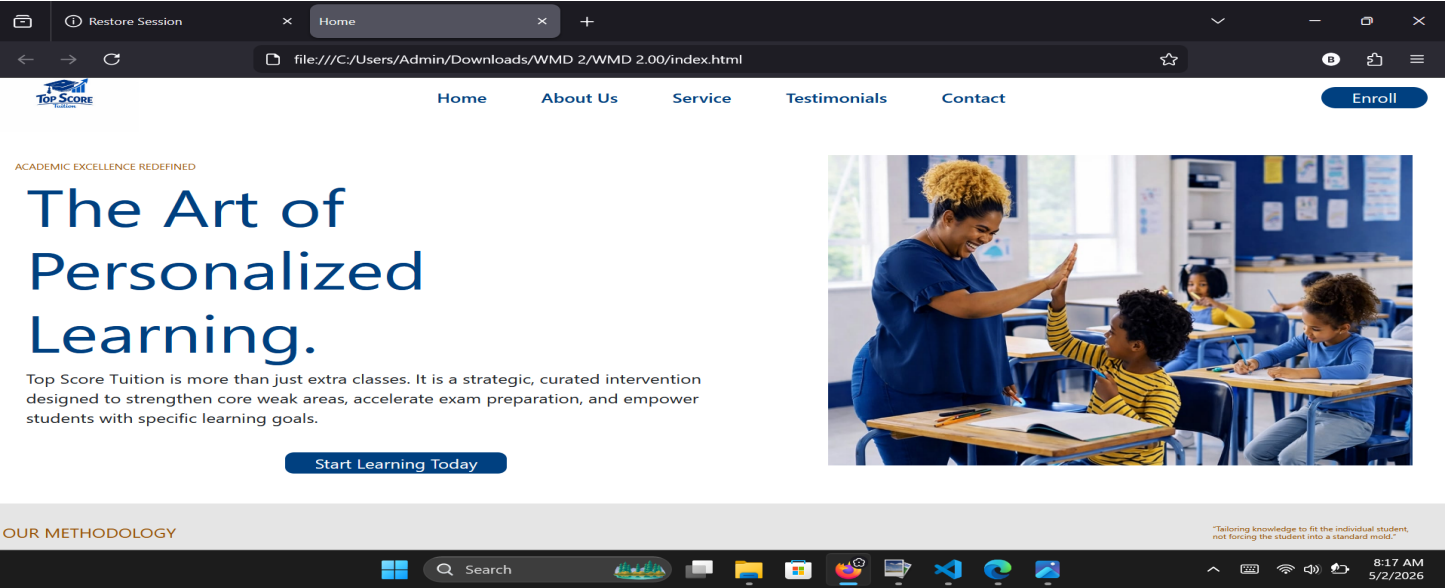

Search

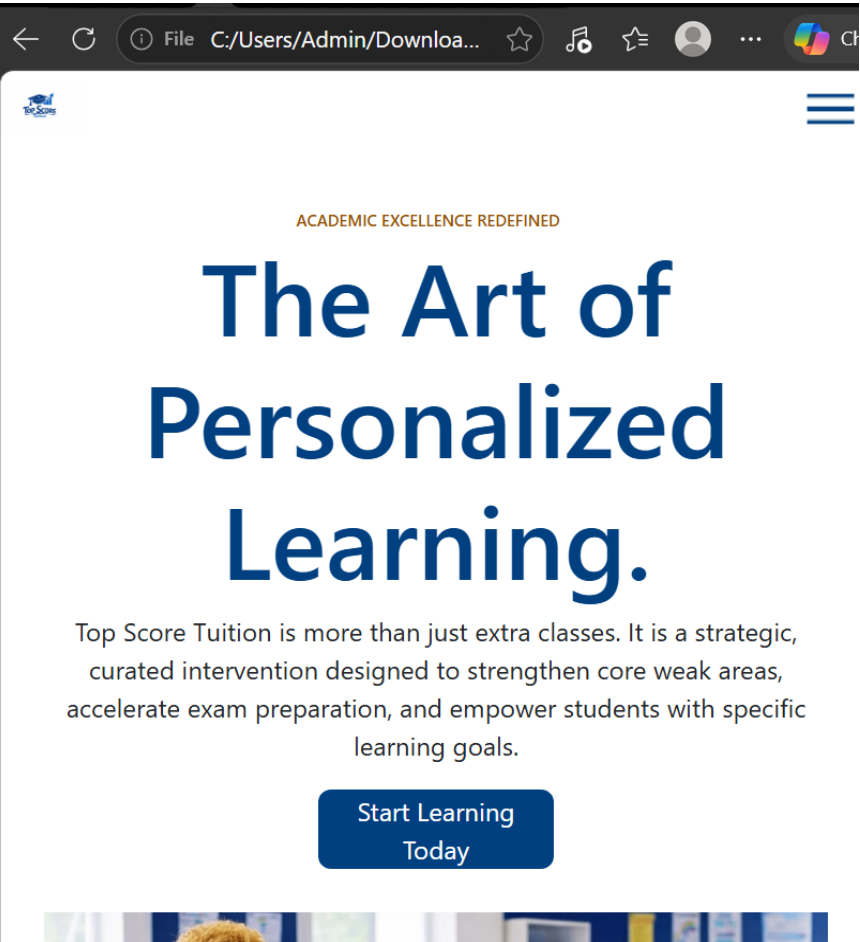

8:17 AM
5/2/2026

Result for Testing in different display sizes

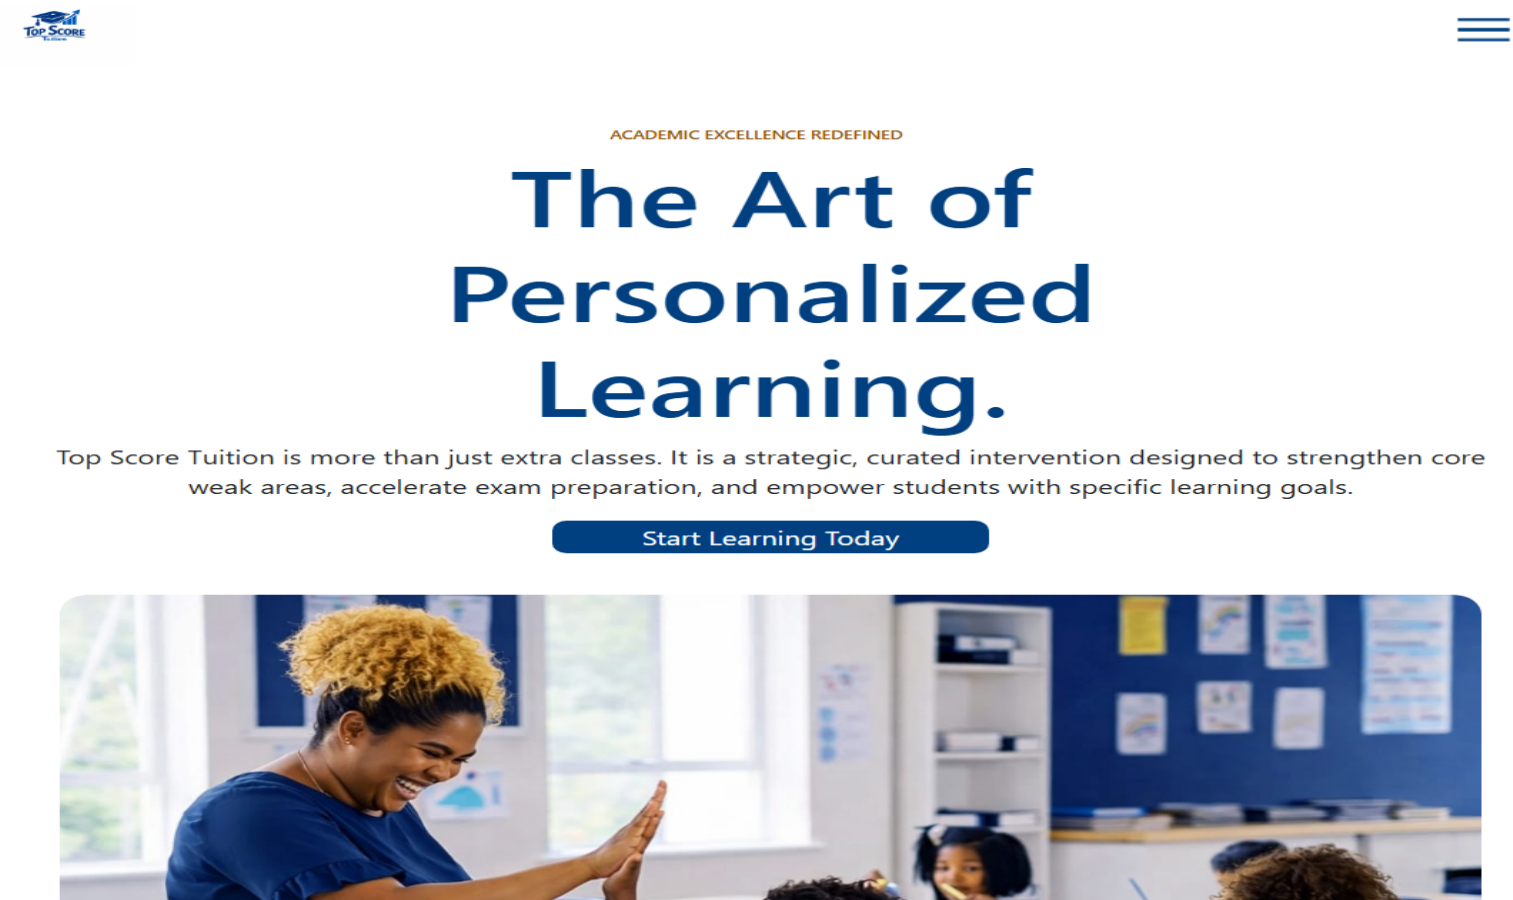

In Laptops → (1366px)

In Mobile phones → (360– 480px)

In Tablets → (768– 1024px)

Publishing & Promotion

My website is hosted in [GitHub Pages](#), because its free and reliable. I used the following [Git commands](#) to manage and monitor changes.

1. `git init` to Start the repository
2. `git add`(also manually added files using add file button) and `git commit`
3. Used **GitHub Pages** under repository settings to publish the site live.

Future Development/ Recommendations

To improve the website in the future:

I will add a page that will be show all our stuff and also our packages.

I will also add a page for online paying.

I will also add contact form that automatically response to inquiries.

I will include interactive tools like quizzes and features that trace progress of Students.
